

Share a private figshare item

Introduction

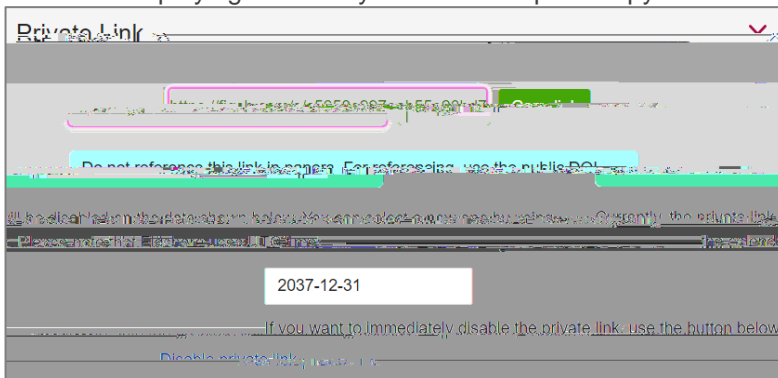

Figshare allows you to generate a private link to an unpublished item that can be sent to a third party for review (or blind peer review). The third party does not need to be a figshare user to view this link.

Procedure

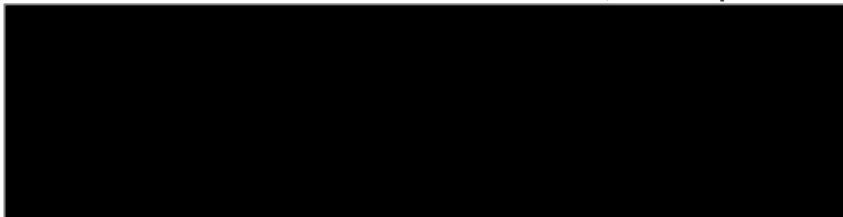

1. Go to **Create a new item**.
2. Select **Share with private link** on the right hand side of the item creation screen.

3. A window displaying a link for your item will open. Copy the link and send it externally (e.g., via email).

4. If you want to disable the link at a later date, return to the item creation pane, select *Private link* to open the window again and then click on **Disable private link**.
5. You will be asked to confirm this action. Select **Yes, disable private link** to continue.
